YaraTera™ CALCINIT™

Specifically manufactured for fertigation, YaraTera™ CALCINIT™ is a fully water soluble source for calcium and nitrate nitrogen.

It is quick to dissolve in water without any residues and can be used in all fertigation systems, including drip, sprinklers and centre pivot irrigators. YaraTera™ CALCINIT™ provides all the benefits of fast-acting highly available nitrogen, with the improved harvest quality characteristics of calcium.

The balance of calcium and nitrate nitrogen in YaraTera™ CALCINIT™ ensures that growth is maximized and that produce quality is not compromised. It is widely used on high value crops to ensure stress-free growth and high yielding, highly marketable, top grade produce.

YaraTera™ CALCINIT™ can be mixed with other water soluble fertilizers, except concentrated stock solutions containing phosphate or sulfate.

Readily Available Calcium

- Improves cell wall strength leading to better quality, longer storage life and lifting marketable crop yields.
- Proven to reduce blossom end rot in tomatoes, tip burns in lettuce and other leafy vegetables, potato soft rot and water drenched marks in watermelon.
- Improves soil structure helping to maintain an optimum root development for high yielding crops.

Composition:

Total Nitrogen (N)	15.5%
Nitrate	14.4%
Ammonium	1.3
Total CaO	25.6
Calcium	18.3
Waterinsoluble	100 ppm
Average diameter of the granules	3.2 mm
Fraction	+/- 1.6 mm
EC fertilizer, ISO certified
